

# [SOLUTION SHEET]

## TEMPERATURE MONITORING FOR REFRIGERATORS

### REAL-TIME MONITORING WITH ALARM

#### ■ THE PRINCIPLE

A complete solution, delivered pre-configured, fully adapted to the temperature control of your pharmacy refrigerators. Our solution guarantees start-up in just 1 minute to control the cold chain of your vaccines and medicines. Our package includes :

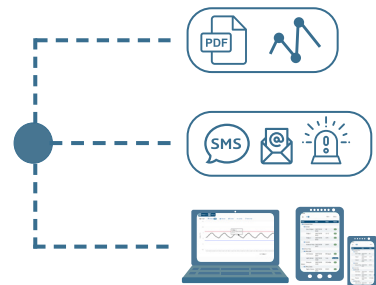

- A digital sensor -50/+90°C, resolution 0.1°C, flat cable for easy passage through door seal.
- IVY TEMP 2D wireless data logger and SIM card with 5 years of data.
- Access [www.thermotrack-webserve.com](http://www.thermotrack-webserve.com) from your PC or cell phone with :
  - Alarms via email, SMS, smartphone notifications and PC siren
  - Graphs and list of values with minimum, maximum and average values
  - Archiving for 10 years
  - Automatic PDF reports by email
  - Unlimited users

#### HOW IT WORKS :

Ivy Temp 2D connected temperature data logger

#### ADVANTAGES :

- Guaranteed 1-minute start
- Delivered pre-configured
- Replaceable long-life batteries
- Magnetic back

**Delivered pre-configured for  
pharmacy refrigerators**

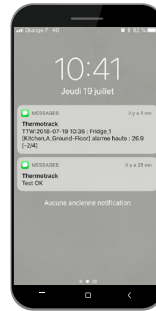

## THERMOTRACK WEBSERVE

Thermotrack Webservice is a cloud-based platform dedicated to the monitoring of refrigerator temperatures.

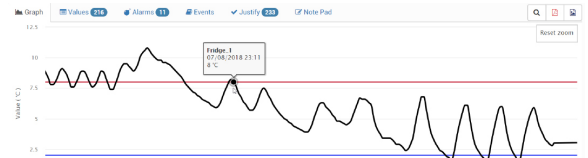

From any PC, tablet or smartphone connected to the Internet, a login and password are all you need to set up your Ivy Temp 2D data loggers, alert thresholds and users.

In the event of an alarm, alerts are sent by e-mail, SMS or siren.

Data are kept for 10 years.

## TECHNICAL SPECIFICATIONS

### IVY TEMP 2D

- Socket for 1 or 2 external probes
- Replaceable long-life battery
- Up to 10-year service life
- Elegant design

### TEMPERATURE SENSOR FLAT CABLE | ZA0078

- Flat cable Ideal for refrigerators, easy passage through the door seal
- Measurement range : -50 to +90°C
- Accuracy :  $\pm 0.5^\circ\text{C}$
- Resolution :  $0,1^\circ\text{C}$

## NB-IOT TECHNOLOGY

NB-IoT (Narrowband Internet of Things) technology is a wireless network specifically designed to connect sensors directly to an Internet platform (Internet of Things or IoT) with low power consumption.

It offers extended coverage in hard-to-reach areas, with enhanced security. This makes it easy to connect and control a wide range of connected objects.
